DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, 22, 24-25, are drawn to a method of treatment using a fusion protein comprising a receptor-antagonizing domain and a positive immunomodulatory domain, classified in class 435, subclass 47, for example.
 - II. Claims 11-21, 26, are drawn to a fusion protein comprising a receptor antagonizing domain and a positive immunomodulatory domain, classified in class 424, subclass 192.1.
 - III. Claim 23, is drawn to a protein wherein the first domain has SEQ ID No. 1 or conservative variants thereof, classified in class 424, subclass 185.1.
 - IV. Claim 27, is drawn to a pharmaceutical composition comprising a fusion protein containing a receptor-antagonizing domain and a positive immunomodulatory domain, classified in class 424, subclass 195.11.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the fusion protein described can be substituted with an chimeric antibody that contains a prolactin binding domain, which upon binding elicits an apoptotic effect, fused to an immunomodulatory domain.

Inventions II-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and/or structures. The inventions of group II and IV are directed at a fusion protein and a pharmaceutical composition containing group II respectively, while the invention of group III is directed at a protein containing within its first domain a sequence of SEQ ID No. 1. All of these

Art Unit: 1642

proteins have different structures, and therefore unrelated. The protein of group II can be used for other purposes other than in the use as a pharmaceutical composition as claimed in group IV, such as for the stimulation of an immune response for the production of an antibody.

Inventions III-IV and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the protein claimed in group III and the pharmaceutical composition claimed in group IV can be used for another type of treatment other than the one described in group I.

Because these inventions are distinct for the reasons given above and the search required for one group is not required for any of the other groups, and would constitute a burdensome search, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
